Showing and Hiding Form Fields

Sample Form Fields and JavaScript
By Thom Parker, Windjack Solutions, Inc.

Sample #1 Showing and Hiding from a single Check Box

Shipping Address is different From Billing Address

> Show/Hide code is in the "Mouse Up" event for the Check Box

Sample #2 Showing and Hiding from a Set of Radio Buttons

> Hide code is placed in the "Mouse Up" event for the *Single* Radio Button.
>
> Show code is placed in the "Mouse Up" event for the *Married* Radio Button.

- Single
- Married

Sample #3 Showing and Hiding from a Set of Radio Check Boxes

> Show/Hide code is placed in the "Validation" event for the check box. This way, only one code event needs to be set, rather than setting the "Mouse Up" event on each check box. However the "Validation" event can only be accessed via JavaScript

Title
- Mr.
- Mrs.
- Ms.
- Other:

Sample #4 Showing a Field Based on Validation of Form Data

Form Data (must be filled out for Submit button to be visible)
Name:
Address:
Email:

> Form validation and show/hide code in the "Calculate" event on a hidden field. That's all this field is for.
